McGraw-Hill is an independent entity from InfoComm International and is not affiliated with InfoComm International in any fashion. This publication and CD may be used in assisting students to prepare for the CTS Exam. Neither InfoComm International nor McGraw-Hill warrants that use of this publication and CD will ensure passing any exam. Practice exam questions were not subject to the same item development process as questions on the actual exam and may or may not reflect the actual exam experience.

CONTENTS

Foreword	xv
Acknowledgments	xvii
About the Author	xviii
Part I The CTS Exam	I
Chapter 1 What is the Certified Technology Specialist Exam?	3
Origin and Purpose of the CTS Exam	3
What Does a CTS Do?	4
Are You Eligible for the CTS Exam?	5
The CTS Exam Application Process	6
Chapter Review	7
Chapter 2 Preparing for the CTS Exam	9
The Scope of the CTS Exam	9
Studying for the Exam	11
Sample CTS Exam Questions	11
Question-Evaluation Strategies	16
What to Expect on Exam Day	16
Identification Requirements	17
Items Restricted from the Exam Room	18
The Exam	18
Chapter Review	21
Part II Creating AV Solutions	23
Chapter 3 Conduct a Site Survey	25
Health and Safety Requirements at a Work Site	25
Safety Regulations	26
Safety Equipment	26
Communicating with Clients	27
Face-to-Face Communication	27
Speaking on the Phone	31
Business Writing	31
Gathering General Site Information	35
Interpreting Site Layout Drawings	38
Drawing Views	38
Title Blocks and Drawing Schedules	45
Drawing Scales	46
Common Architectural Drawing Abbreviations	47
Architectural Drawing Symbols	47
Converting Measurements	50

	Calculating Area and Volume	50
	Chapter Review	51
	Questions	52
	Answers	55
Chapter 4	Gather Customer Information	57
	Obtaining Information About Client Needs	57
	Conducting Initial Meetings with the Client and End Users	58
	Conducting a Needs Analysis	59
	Benchmarking	67
	Obtaining Scale Drawings of the Customer Space	71
	Obtaining Client Contact Information	73
	Obtaining Information About Constraints	74
	Chapter Review	75
	Questions	75
	Answers	77
Chapter 5	Evaluate a Site Environment	79
	Identifying Room Needs	80
	Types of Rooms	80
	The Technical Functions of a Room	82
	Functions of Associated Spaces	84
	General Room Features and Characteristics	85
	Assessing the Room Environment	86
	Assessing the Acoustic Environment	86
	Assessing the Visual Environment	88
	Assessing Room Lighting	92
	Assessing Services	94
	Assessing Electric Power Availability	95
	Assessing Data System Capabilities	95
	Identifying Cable Access Locations	96
	Assessing HVAC Components	96
	Chapter Review	96
	Questions	97
	Answers	99
Chapter 6	Recommend Changes to a Site Environment	101
	Addressing Room Environment Issues	101
	Acoustic Issues	102
	Sightline Issues	104
	Ambient and Artificial Lighting Issues	106
	Furniture and Room Finish Issues	107
	Addressing Building Environment Issues	107
	Building Service Issues	108
	Building Structure and Substructure Issues	108
	Building Regulation Issues	108

Chapter Review	111
Questions	111
Answers	112
Chapter 7 Develop a Functional AV Scope	113
Compiling Information for the Functional AV System Scope	114
Needs Determine Applications	114
Form Follows Function	115
An Overview of the Program Phase	115
Gathering Information About Facilities	116
Conducting Program Meetings	119
Documenting the Functional AV Scope	
with the Program Report	120
Objectives of the Program Report	120
Contents of the Program Report	120
Presenting the Program Report to the Client	125
Distributing the Program Report	125
Preparing for the Client Presentation	127
Conducting the Client Presentation	127
Program Report Approval and Next Steps	128
Design-Bid-Build Process	128
Design-Build Process	128
Design-Build RFP	128
Chapter Review	129
Questions	129
Answers	130
Chapter 8 Design AV Solutions	131
Designing the Display System	132
Determining the Display System's Purpose	132
Identifying the Display Devices	133
Identify Monitoring, Feed, and Recording Requirements	134
Identifying the Display Signal Sources	137
Identifying Switching and Distribution Components	139
Addressing Video Signal Issues	140
Adding Processing and Conversion	140
Designing the Audio System	142
Identifying the Audio System's Purpose	142
Addressing the Three Parameters for an Audio System	143
Identifying the Audio Sources	147
Identifying the Audio Destinations	148
Meeting Mixing and Amplification Requirements	150
Adding Processing and Conversion	150
Considering Power Amplifiers and Loudspeaker Wiring	152
Calculating Power Required at the Loudspeaker	158

Designing Control Systems	160
Defining the Control System	161
Developing Control System Specifications	162
Providing System Design Documentation	163
System Drawings	163
Bill of Materials	169
Other Design Considerations	170
Future Provisions	170
Value Engineering	170
Design and Measurement Tools	171
Chapter Review	171
Questions	171
Answers	173
Chapter 9 Sell an AV Solution	175
Developing a Proposal	175
Proposal Contents	176
Copying and Packaging the Proposal	177
Presenting the Proposal	178
Salesmanship	178
Typical Sales Mistakes	180
Creating a Formal Contract	180
Maintaining a Focus on Customer Service	181
Chapter Review	182
Questions	182
Answers	184
Chapter 10 Conduct a Vendor Selection Process	185
Identifying Potential Equipment and Service Vendors	186
Equipment and Service Considerations	186
Criteria for Selecting Potential Vendors	189
Creating an RFP for Equipment and Services	190
Contacting Potential Vendors About Your RFP	191
Reviewing Vendor Proposals	192
Communicating with Vendors	193
The Contract Award Process	193
Chapter Review	193
Questions	194
Answers	195
Chapter 11 Market AV Technologies	197
Defining Your Market, Audience, and Value Proposition	198
Defining the Market	198
Identifying Your Target Audience	200
Establishing Your Value Proposition	201
Developing Your Marketing Message	202
Establishing Your Marketing Budget	203

Creating Your Marketing Materials	203
Communicating Your Marketing Message	204
Chapter Review	204
Questions	204
Answers	206
Chapter 12 Provide AV Solutions	207
Installing AV Equipment and Systems	208
Preparing for the Installation	208
Job Site Safety Concerns	209
Cable Termination	209
Rack Building	216
Cable Handling and Pulling	221
Mounting AV Components	227
Setting Up and Configuring AV Control Systems	233
Assembling the Control System	234
Using Control System Software	236
Testing and Installing the Control System	236
Final Control System Testing	237
Producing AV Events	237
Preparing for the Event	238
Loading and Unloading a Truck	238
Setting Up Equipment	239
Providing Support, Documentation, and Training for End Users	244
Training Users and Support Staff	244
Documenting AV Systems	245
Supporting AV Systems	247
Chapter Review	247
Questions	248
Answers	251
Part III Operating and Maintaining AV Solutions	253
Chapter 13 Operate an AV Solution	255
Verifying That AV Equipment Is Operating Properly	255
Commissioning Checklist (Portion)	256
The Commissioning Process	257
Checking Signal Flow	257
Briefing the Client on AV System Operation	258
Briefing Topics and Style	258
Documenting How to Operate the AV System	258
Documenting Preventive Maintenance	259
Striking a Room	260
Chapter Review	261
Questions	262
Answers	263

Chapter 14	Conduct Maintenance Activities	265
	Maintaining AV Systems and Components	265
	Maintenance Warranties and Agreements	266
	Performing AV System Maintenance	267
	AV System Testing Equipment	269
	Documenting Maintenance Activities	270
	Chapter Review	271
	Questions	271
	Answers	272
Chapter 15	Manage AV Business Operations	273
	Working with Vendors, Suppliers, and Customers	274
	Managing Levels of Stock and Materials	274
	Ensuring Security of Equipment and Supplies	276
	Hiring Security Guards	277
	Deterring Theft	277
	Keeping Up-to-Date Equipment Records	278
	Maintaining the Professional Skills and Knowledge of Your Staff	278
	Resources for AV Staff	279
	Training	280
	Monitoring Client Sites	280
	Conducting Administrative Work	281
	Chapter Review	281
	Questions	282
	Answers	283
Part IV	Conducting AV Management Activities	285
Chapter 16	Manage an AV Project	287
	Managing Project Activities and Resources	288
	Creating a Work Breakdown Structure	288
	Creating a Logic Network for Coordination of Resources	289
	Managing the Project Budget	290
	Monitoring Work at the Client Site	292
	Coordinating Project Activities	292
	Holding a Project Kickoff Meeting	293
	Attending Project Status Meetings	294
	Creating Project Schedules	294
	Coordinating AV Work with Other Trades	295
	Providing Project Documentation	296
	Information-Related Documents	297
	Change Documentation	297
	Chapter Review	299
	Questions	299
	Answers	300

Chapter 17	Manage AV Personnel	303
	Hiring AV Staff	303
	Determining Job Requirements	303
	Writing Job Advertisements	304
	Assessing Job Applicants	306
	Interviewing Applicants	308
	Maintaining and Improving Staff Skills	313
	Assessing Staff Performance	313
	Promoting Staff	314
	Disciplining Problem Staff	314
	Chapter Review	315
	Questions	315
	Answers	316
Chapter 18	Create Estimates for AV Activities	317
	An Overview of AV Project Estimates	317
	Estimate Considerations	318
	Estimate Markup	318
	Creating a Project Estimate	319
	Estimating Equipment and Material Costs	319
	Estimating Project Labor Costs	319
	Estimating Labor Costs	320
	Estimating Other Costs	320
	Providing Estimates to Clients	320
	Chapter Review	321
	Questions	321
	Answers	322
Chapter 19	Purchase AV Supplies and Equipment	323
	Identifying Purchasing Needs	323
	Identifying General Categories of Purchase Items	324
	Creating Purchase Lists	324
	Identifying Vendors and Suppliers	325
	Obtaining Pricing and Delivery Schedules	325
	Chapter Review	327
	Questions	327
	Answers	328
Chapter 20	Perform Job Costing Activities	329
	Gathering Cost Information	329
	Producing Interim Invoices	331
	Analyzing Utilization Rates	331
	Creating Project Profit-and-Loss Documents	331
	Chapter Review	332
	Questions	333
	Answers	333

Part V	Servicing AV Solutions	335
Chapter 21	Troubleshoot AV Solutions	337
	Preparing to Troubleshoot	337
	An Overview of the Troubleshooting Process	338
	Recognizing Symptoms and Elaborating on Them	339
	Selecting a Strategy	339
	A Troubleshooting Scenario	340
	Chapter Review	341
	Questions	341
	Answers	342
Chapter 22	Repair AV Solutions	345
	An Overview of the Repair and Restoration Process	345
	Addressing Common AV System Problems	346
	The Top Ten AV Problems and Solutions	347
	Maintenance and Repair Records	356
	Billing for Repair Activities	356
	Chapter Review	357
	Questions	357
	Answers	358
Part VI	Appendixes	359
Appendix A	About the CD-ROM	361
	System Requirements	361
	Installing and Running MasterExam	361
	MasterExam	361
	Using the Electronic Book and Help	362
	Help	362
	Removing Installation(s)	362
	Technical Support	362
	LearnKey Technical Support	362
Appendix B	Essentials of AV Technology	363
	Communication of an Idea	363
	What Is an AV System?	364
	AV System Goals	364
	Analog and Digital Signals	365
	Analog and Digital Waveforms	365
	Digital Signal Processing and Sampling	365
	Bit Depth of a Digital Signal	367
	Bit Rate	368
	Signal Compression	368
	Digital Formats	369
	Noise and Signal Transmission	369
	Analog and Digital Signal Considerations	369

Networks	371
Types of Area Networks	371
Network Topology	372
Ethernet Standard	373
Network Connections	373
The OSI Reference Model	376
Network Interface Card and MAC Address	378
Internet Protocol Addressing	378
Dynamic Name Server	381
Network Switches and Routers	382
Light	383
Wavelength, Frequency, and Amplitude of Light	383
Units of Light Measure	384
Inverse-Square Law and Light	387
Mixing Colors of Light	388
Color Temperature	388
Ambient Light	389
Image Capture	389
Camera and Focus	390
Video Signals	393
Video Signal Decoding	398
Computer Signals	399
Producing an Image	402
The Projected Image	406
Projector Optics	406
Display and Projection Technology	407
Screens	409
Perceived Quality	410
Viewer Placement	411
Throw Distance	412
Keystone Error and Correction	413
Digital Display Alignment	414
Projection System Brightness	415
Brightness and Contrast Adjustments	416
Audio Systems	418
Sound Waves	418
Harmonics	421
Logarithms	422
Decibels	422
The Inverse-Square Law and Sound	423
Acoustics	424
Sound Capture	427
Microphones	428
Audio Signal Levels	434
Audio Devices	436
Loudspeakers	442
Audio Signal Level Monitoring	444

Control Systems	448
Control System Functions	449
Control System Components and Interfaces	449
Control Signals	450
Contact-Closure Control	450
Variable-Voltage Control	451
IR Control	451
RF Control	452
RS-232, RS-422, and RS-485	452
Ethernet Control Systems	453
Control Systems on Networks	453
Electrical Systems	453
Voltage and Current	454
Resistance and Impedance	455
Power	456
Ohm's Law	456
Electrical Circuits	457
Series and Parallel Circuits	457
Grounding	458
Electrical Power and Distribution	458
Electrical Safety	459
Signal-Management Systems	460
Wire and Cable	461
Cable Types	464
Connectors	465
Signal Integrity	466
Distance Limits	467
Switchers	467
Distribution Amplifiers	469
Rack-Building Considerations	470
Signal-Management System Summary	471
Radio Waves	472
Transmitting and Receiving RF	472
The Importance of Antennas	472
Diversity Systems	473
RF Video Systems	474
Future AV Trends	476
Building Information Modeling	476
Green AV	476
LED Technology	477
 Glossary	 479
Index	505
